Medinfo Marius Fieschi 2004 A fundamental challenge for medical informatics is to develop and apply better ways of understanding how information technologies and methods can help support the best care for every patient every day given available medical knowledge and resources. In order to provide the most effective healthcare possible, the activities of teams of health professionals have to be coordinated through well-designed processes centered on the needs of patients. For information systems to be accepted and used in such an environment, they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient. Developing innovative approaches to design and build evidence-based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources. Parallel challenges arise in the organization of research at the biological and clinical levels, where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages. These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities.

European 'Security' Governance George Christou 2014-06-11 This book argues that we can understand and explain the EU as a security and peace actor through a framework of an updated and deepened concept of security governance. It elaborates and develops on the current literature on security governance in order to provide a more theoretically driven analysis of the EU in security. Whilst the current literature on security governance in Europe is conceptually rich, there still remains a gap between those that do 'security governance' and those that focus on 'security' per se. A theoretical framework is constructed with the objective of creating a conversation between these two literatures and the utility of such a framework is demonstrated through its application to the geospatial dimensions of EU security as well as specific cases studies in varied fields of EU security. This book was originally published as a special issue of European Security.

Professionalism in Early Childhood Education and Care Carmen Dalli 2013-09-13 The professionalism of the early childhood sector has gained prominence on the policy agendas of many countries. National pedagogical frameworks or curricula and an upsurge of pathways to gaining or upgrading qualifications has led to a pervasive terminology of professionalism. Yet, despite the pervasiveness of this terminology, the question of what professionalism means in early years contexts remains open to debate. This book draws together the work of an international group of scholars who have engaged with this question. They ask: How can professionalism be conceptualised in early childhood settings? How might one act professionally in increasingly diverse and changing social and cultural contexts? Do we have a common ground of understanding about these terms? Are there key concepts that can be agreed upon? Drawing on research and experience across a wide range of national contexts, this book seeks an understanding of early childhood professionalism in local contexts that might throw light on the global implications of this term. This book was published as a special issue in the European Early Childhood Education Research Journal.
