Republic of Latvia International Monetary Fund. European Dept. 2019-08-07 This Selected Issues paper analyses the implications of global value chains (GVC) participation for Latvia's competitiveness and exposure to risks. Using a structural model, it assesses Latvia's competitiveness through different real effective exchange rate (REER) measures and examines the main factors behind differences in the measures. Based on this analysis, the paper suggests policy options to strengthen Latvia's competitiveness. The paper also estimates the

impact of an appreciation of the GVC related REER measure on value added export growth and real GDP growth, and finds sizable effects, suggesting that a rapid labor market tightening could lead to erosion in competitiveness and reduction in growth. Finally, trade tension induced tariff hikes may have significant cost for Latvia, especially in terms of value added produced in the country. Trade tension induced tariff hikes are likely to have moderate costs for Latvia in terms of value added produced in the country. In this regard, policies aimed at enhancing product sophistication or quality and export market

diversification could mitigate Latvia's exposure to trade shocks in GVCs.

Human Resource Development: Successful Factors Johnny Ch Lok 2019-03-07 Chapter Eleven

Developing countries Human resource development whether need to be improved Do developing countries need to help human resource development to assist their businesses development, it is possible due to staff individual lacks knowledge to do whose job in whose organization ? What is the developing and developed countries' organizational human resource strategic difference, e.g. award strategies? I shall indicate one developing

country, such as South Africa's businesses' general organizational human resource strategy case to explain whether what causes their human resource strategies, e.g. award management strategies are different to compare developed countries, such as US, UK as well as I also indicate what weak points that they ought to concern in order to improve these developing countries' businesses productivities and efficiency, if South Africa 's firms hope to raise staff performance to be better. In general, South Africa employers feel human resource development strategy is needed to innovate and attempt to

ensure that they meet the needs of their economy. So, South Africa employers are considering whether how they ought need to improve their human resource strategies in their organizations in order to raise productive efficiencies and performance to their employees effectively. In fact, because South Africa country lacks effective human resource development to recommend to itself country's businessmen how to select the right employees to do right positions, how to evaluate whom has more effort to be promoted to do senior position, lacking fair reward and welfare to compensate to their employees.

So, it brings many reasons to explain why in South Africa society unemployment and poverty still existence. Not all of the reasons have to do with the capabilities of people, may have to do with the unequal distribution of productive assets in South Africa society. Nowadays, the South Africa employers only feel South Africa workers are only their own labour to use or sell. Hence, they won't like to provide reasonable and fair award to compensate for their Africa employees general lack high education level and skills. So, it also influences their award will not increase. Moreover, there are South Africans who have

skilled labours to sell and they can not find buyers because there are not enough jobs, their skills do not match the demands, and there is a systematic process for information to flow between government, the workplace and labour. Hence, many South African people are unemployed, due to their knowledge are not enough to satisfy or accept to employers' demands. It will cause South African income inequality will be continue serious. The salary range between the high education level and low education level of labours' difference is large. A cycle of income inequality, low skills and poor

education have limited economic growth.

Autophagy Daniel Klionsky 2003-12-15 Starting in the early 1970s, a type of programmed cell death called apoptosis began to receive attention. Over the next three decades, research in this area continued at an accelerated rate. In the early

1990s, a second type of programmed cell death, autophagy, came into focus. Autophagy has been studied in mammalian cells for many years. The recent

How to Survive The End Of The World As We Know It James Wesley, Rawles 2010-01-07 This is the definitive guide on how to prepare for any crisis, from global financial collapse to a flu pandemic. It would only take one unthinkable event to disrupt our way of life. If there is a terrorist attack, a flu pandemic, or sharp currency devaluation, you may be forced to fend for yourself in ways you've never imagined. Where would you get water? How would you

communicate with relatives? What would you use for fuel? Survivalist expert James Wesley, Rawles, editor of SurvivalBlog.com and a former US Army Intelligence officer, shares the essential tools and skills you will need for your family to survive, including how to find and build a retreat, store food, supply power, rear animals, administer medicine, barter, and defend your family. 'Save those wine corks. Burned cork makes quick and cheap face camouflage.' 'Store only foods with minimal spices. When you are surrounded by starving people, just heating up a can of spicy chili con carne could be a death warrant.' 'If you

are on a budget, you might get away with a good-quality bolt-action rifle...'

Radio Frequency and Microwave Electronics

Illustrated Matthew M. Radmanesh 2001

Foreword by Dr. Asad Madni, C. Eng., Fellow

IEEE, Fellow IEE Learn the fundamentals of RF

and microwave electronics visually, using many

thoroughly tested, practical examples RF and microwave technology are essential throughout industry and to a world of new applications-in wireless communications, in Direct Broadcast TV, in Global Positioning System (GPS), in healthcare, medical and many other sciences. Whether you're seeking to strengthen your skills or enter the field for the first time, Radio Frequency and Microwave Electronics Illustrated is the fastest way to master every key measurement, electronic, and design principle you need to be effective. Dr. Matthew Radmanesh uses easy mathematics and a highly

graphical approach with scores of examples to bring about a total comprehension of the subject. Along the way, he clearly introduces everything from wave propagation to impedance matching in transmission line circuits, microwave linear amplifiers to hard-core nonlinear active circuit design in Microwave Integrated Circuits (MICs). Coverage includes: A scientific framework for learning RF and microwaves easily and effectively Fundamental RF and microwave concepts and their applications The characterization of two-port networks at RF and microwaves using S-parameters Use of the Smith Chart to simplify

analysis of complex design problems Key design considerations for microwave amplifiers: stability, gain, and noise Workable considerations in the design of practical active circuits: amplifiers, oscillators, frequency converters, control circuits RF and Microwave Integrated Circuits (MICs) Novel use of "live math" in circuit analysis and design Dr. Radmanesh has drawn upon his many years of practical experience in the microwave industry and educational arena to introduce an exceptionally wide range of practical concepts and design methodology and techniques in the most comprehensible fashion. Applications

include small-signal, narrow-band, low noise, broadband and multistage transistor amplifiers; large signal/high power amplifiers; microwave transistor oscillators, negative-resistance circuits, microwave mixers, rectifiers and detectors, switches, phase shifters and attenuators. The book is intended to provide a workable knowledge and intuitive understanding of RF and microwave electronic circuit design. Radio Frequency and Microwave Electronics Illustrated includes a comprehensive glossary, plus appendices covering key symbols, physical constants, mathematical identities/formulas, classical laws of

electricity and magnetism, Computer-Aided-Design (CAD) examples and more. About the Web Site The accompanying web site has an "E-Book" containing actual design examples and methodology from the text, in Microsoft Excel environment, where files can easily be manipulated with fresh data for a new design.
