Social Media in Industrial China Xinyuan Wang 2016-09-13 Life outside the mobile phone is unbearable.' Lily, 19, factory worker. Described as the biggest migration in human history, an estimated 250 million Chinese people have left their villages in recent decades to live and work in urban areas. Xinyuan Wang spent 15 months living among a community of these migrants in a small factory town in southeast China to track their use of social media. It was here she witnessed a second migration taking place: a movement from offline to online. As Wang argues, this is not simply a convenient analogy but represents the convergence of two phenomena as profound and consequential as each other, where the online world now provides a home for the migrant workers who feel otherwise 'homeless'. Wang's fascinating study explores the full range of preconceptions commonly held about Chinese people - their relationship with education, with family, with politics, with 'home' - and argues why, for this vast population, it is time to reassess what we think we know about contemporary China and the evolving role of social media.

The Railway Goods Shed and Warehouse in England John Minnis 2016-09-15 Although goods traffic accounted in many cases for a higher proportion of railway companies' revenue than passengers, the buildings associated with it have received very little attention in comparison to their passenger counterparts. They once played as important a role in distribution as the 'big sheds' near motorway junctions do today. The book shows how the basic design of goods sheds evolved early in the history of railways, and how the form of goods sheds reflected the function they performed. Although goods sheds largely functioned in the same way, there was considerable scope for variety of architectural expression in their external design. The book brings out how they varied considerably in size from small timber huts to the massive warehouses seen in major cities. It also looks at how many railway companies developed standard designs for these buildings towards the end of the 19th century and at how traditional materials such as timber, brick and stone gave way to steel and concrete in the 20th This building type is subject to a high level of threat with development

pressure in urban and suburban areas for both car parking and housing having already accounted for the demise of many of these buildings. Despite this, some 600 have been identified as still extant and the book will, for the first time, provide a comprehensive gazetteer of the surviving examples.

Capitalism's Achilles Heel Raymond W. Baker 2005-08-05 For over forty years in more than sixty countries, Raymond Baker has witnessed the free-market system operating illicitly and corruptly, with devastating consequences. In Capitalism's Achilles Heel, Baker takes readers on a fascinating journey through the global free-market system and reveals how dirty money, poverty, and inequality are inextricably intertwined. Readers will discover how small illicit transactions lead to massive illegalities and how staggering global income disparities are worsened by the illegalities that permeate international capitalism. Drawing on his experiences, Baker shows how Western banks and businesses use secret transactions and ignore laws while handling some \$1 trillion in illicit proceeds each year. He also illustrates how businesspeople, criminals, and kleptocrats perfect the same techniques to shift funds and how these tactics negatively affect individuals, institutions, and countries.
