On the liquid 's surface, the molecules have fewer neighbors in comparison with the bulk volume. As a result, the energy interaction shows itself in the surface tension. Traditionally, the surface tension can be assumed as a force in the unit of the length which can be counted by the unit of Newton on squared meter, or energy on the units of the surface. The surface tension, implies the interface between liquid and vapor, which is an example of the surface tensions. The equilibrium between these surface tensions, decides that a droplet on a solid surface, would have a droplet form or will change to layer form. This book collects new developments in wetting and wettability science.

**Dombey and Son** Charles Dickens 1848 This tale of Paul Dombey, his son (also named Paul) and his daughter Florence was first published in installments, between 1846 and 1848. Though called Dombey and Son, the story is as much about Mr. Dombey's relationship with Florence, the damage done to it by Dombey's pursuit of worldly success and accomplishment, and their eventual reconciliation. Dombey and Son is one of Dickens' richest novels, with vividly drawn characters and biting social commentary. **Stress Solutions for Pregnant Moms** Susan Andrews, Ph.D. 2012-05-08 In this cutting-edge work, neuropsychologist Dr. Susan Andrews shows why too much stress during pregnancy can increase the risk of childhood problems-- and how you can stay in balance and boost your baby's potential with simple, effective stress solutions. As "Stress Solutions for Pregnant Moms" shows, managing stress could be just as important to your child's health as avoiding smoking and alcohol while pregnant. **Parenting Matters** National Academies of Sciences, Engineering, and Medicine 2016-12-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family--"which includes all primary caregivers"--are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in

their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on

areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

**Practical Ethics** Peter Singer 2011-02-21 For thirty years, Peter Singer's *Practical Ethics* has been the classic introduction to applied ethics. For this third edition, the author has revised and updated all the chapters and added a new chapter addressing climate change, one of the most important ethical challenges of our generation. Some of the questions discussed in this book concern our daily lives. Is it ethical to buy luxuries when others do not have enough to eat? Should we buy meat from intensively reared animals? Am I doing something wrong if my carbon footprint is above the global average? Other questions confront us as concerned citizens: equality and discrimination on the grounds of race or sex; abortion, the use of embryos for research and euthanasia; political violence and terrorism; and the preservation of our planet's environment. This book's lucid style and provocative arguments make it an ideal text for university courses and for anyone willing to think about how she or he ought to live.

**From Soupy to Nuts!** Tim Kiska 2005 Back in the 1940s - before coaxial cable from the East Coast reached Detroit - television was as local as Vernors, Sanders Hot Fudge and Hudson's. There was room for clowns, bowlers, philosophers, journalists, adventurers, movie mavens, wrestlers and magicians. The people who put these shows on were drunks, geniuses, thugs, heroes, artists, craftsmen, hustlers and poets. Some were all of these things at times. A few were all these things before lunch. As the medium grew, thousands of Detroiters visited Channel 4 to see Milky the Clown, danced on Channel 62's The Scene or tuned in to watch bombastic anchorman Bill Bonds. With the evaporation of distinct local television, a piece of Detroit's character disappeared. From Soupy to Nuts! is a snapshot of Detroit TV history - from Sonny Eliot, Bozo the Clown, Bill Kennedy, Lou Gordon and Gil Maddox to Al Ackerman, Sir Graves Ghastly, Dick the Bruiser and Mr. Belvedere. *The Saturday Review of Politics, Literature, Science and Art* 1865

*Communities in Action* National Academies of Sciences, Engineering, and Medicine 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
