Ending Global Poverty Stephen C. Smith 2015-03-17 Over 800 million people suffer from chronic hunger, and over ten million children die each year from preventable causes. These may seem like overwhelming statistics, but as Stephen Smith shows in this call to arms, global poverty is something that we can and should solve within our lifetimes. Ending Global Poverty explores the various traps that keep people mired in poverty, traps like poor nutrition, illiteracy, lack of access to health care, and others and presents eight keys to escaping these traps. Smith gives readers the tools they need to help people overcome poverty and to determine what approaches are most effective in fighting it. For example, celebrities in commercials who encourage viewers to "adopt" a poor child really seem to care, but will sending money to these organizations do the most good? Smith explains how to make an informed decision. Grass-roots programs and organizations are helping people gain the capabilities they need to escape from poverty and this book highlights many of the most promising of these strategies in some of the poorest countries in the world, explaining what they do and what makes them effective.

The Elusive Quest for Growth William R. Easterly 2002-08-02 Why economists' attempts to help poorer countries improve their economic well-being have failed. Since the end of World War II, economists have tried to figure out how poor countries in the tropics could attain standards of living approaching those of countries in Europe and North America. Attempted remedies have included providing foreign aid, investing in machines, fostering education, controlling population growth, and making aid loans as well as forgiving those loans on condition of reforms. None of these solutions has delivered as promised. The problem is not the failure of economics, William Easterly argues, but the failure to apply economic principles to practical policy work. In this book Easterly shows how these solutions all violate the basic principle of economics, that people—private individuals and businesses, government officials, even aid donors—respond to incentives. Easterly first discusses the importance of growth. He then analyzes the development solutions that have failed. Finally, he suggests alternative approaches to the problem. Written in an accessible, at times irreverent, style, Easterly's book combines modern growth theory with anecdotes from his fieldwork for the World Bank.

Entrepreneurship and Economic Growth David B. Audretsch 2006-04-27 By serving as a conduit for knowledge spillovers, entrepreneurship is the missing link between investments in new knowledge and economic growth. The knowledge spillover theory of entrepreneurship provides not just an explanation of why entrepreneurship has become more prevalent as the factor of knowledge has emerged as a crucial source for comparative advantage, but also why entrepreneurship plays a vital role in generating economic growth. Entrepreneurship is an important mechanism permeating the knowledge filter to facilitate the spill over of knowledge and ultimately generate economic growth.

World Development Report 1978 1978 This first report deals with some of the major development issues confronting the developing countries and explores the relationship of the major trends in the international economy to them. It is designed to help clarify some of the linkages between the international economy and domestic strategies in the developing countries against the background of growing interdependence and increasing complexity in the world economy. It assesses the prospects for progress in accelerating growth and alleviating poverty, and identifies some of the major policy issues which will affect these prospects.

Development as Freedom Amartya Sen 2001-01-18 Amartya Sen, winner of the 1998 Nobel Prize in Economic Science -- Cover. **The Urban Informal Sector** Ray Bromley 2013-10-22 The Urban Informal Sector is a collection of papers presented at a multi-disciplinary conference on "'The urban informal sector in the Third World,'" organized by the Developing Areas Study Group of the Institute of British Geographers in London on March 19, 1977. Topics covered range from general reviews and national case studies to detailed studies of particular occupations in individual cities. This book is comprised of 12 chapters and begins by reviewing the relevance of dualist models of economic activities and enterprises, as applied to Third World countries, concentrating on the origins, diffusion, and deficiencies of the formal/informal dualist classification. Subsequent chapters explore the informal sector debate in studies of Third World poverty and employment; the nature of informal-formal sector relationships; the structure of the labor markets in the "'organized"' and "'unorganized"' sectors of urban economies in South India; and the problem of urban poverty, its relation to employment, and rising spatial inequalities in Brazil. Capitalist and petty commodity production in Nigeria is also discussed, along with John Turner's views on housing policy. Fiscal Policy for Development Tony Addison 2004-05-25 Fiscal policy is critical to the development of poor countries. This book provides both a comprehensive and balanced guide to the current policy debate and new results on the development impact of fiscal policies. It is essential reading for students of development economics as well as all those seeking to improve policy-effectiveness.

Managing Development in a Globalized World Habib Zafarullah 2017-09-25 Traditionally, development has been rooted in ideologies and assumptions prevalent in the developed world and in practices and strategies adopted by leading industrial nations. However, historically, eclectic ideas and approaches often clash with existing long-established notions of progress and modes of realizing social and economic change. Managing Development in a Globalized World: Concepts, Processes, Institutions explores this topic by incorporating ideas and interpretations that have previously

been neglected or given inadequate attention in the discourse on developing countries. It underscores development as a continuous process that must be supported by sound policies and efficient management, supplying a wider understanding of the field. The authors argue that the application of innovative development techniques and best practices is essential for obtaining optimum results in meeting the needs of society. They examine the style of managing development with a new perspective that links the phenomenon with changing demands and the interplay of internal/external actors and a host of stakeholders. An exploration of key sectors in development provides clear comprehension of problems and solutions. A careful synthesis of theoretical/conceptual and empirical literature, the book assesses real-world situations and provides insight into the operational dynamics of development policies, programs, and institutions. It focuses on goals, values, and dynamics of development management that are undergoing rapid changes and continue to be enhanced to alleviate poverty and improve living standards in an era of globalization and inter-regional and inter-institutional synergies. It highlights best practices essential for the efficient and effective delivery of human development services that are designed and put in place to obtain optimum results in meeting the needs of society. **Development Management** Justice Nyigmah Bawole 2016-10-04 Despite significant financial investments, the rate of development and pace of poverty reduction in developing and transitional countries has not always matched expectations. Development management typically involves complex interactions between governmental and non-governmental organisations, donors and members of the public, and can be difficult to navigate. This volume brings together a group of international contributors to explore the theoretical and empirical underpinnings of development management, and to consider the prospects and challenges associated with it in the context of both developing and transitional countries. Referring to dominant norms and values in public and developmental organisations, development management is tied up with the attitudes and perceptions of various stakeholders including: government officials, public sector managers, aid workers, donors and members of the public. Attempting to make sense of complex interactions between these actors is highly problematic and calls for new approaches, models and insights. Based on cutting-edge research, the chapters challenge much of the previous discourse on the subject and evaluate the challenges and opportunities that it presents. Development Management offers academics, researchers and practitioners of public administration, business and management, international development and political science a comprehensive and state-of-the-art review of current research on development management in the context of developing and transitional countries.

Sustainable Industrialization in Africa Banji Oyelaran-Oyeyinka 2016-04-29 Sustainable Industrialization in Africa explores the issues that confront development policy in the context of the MDGs and the post-2015 development agenda from an African perspective. The book argues that development is an ultimate outcome of sustainable, equitable industrialization, and that any development agenda for the future has to ensure that industrialization is fostered in a way that makes economies independent and responsive to the needs of all citizens. Future challenges for sustainable industrialization in Africa, based upon the differences in its current industrialization trajectories, are discussed to ensure that industrial growth results in positive economic and social outcomes in the context of the post-2015 development agenda.

The Process of Economic Development James M. Cypher 2004 This textbook includes discussions of such topics as the environment, the debt case, export-led industrialization, import substitution industrialization, growth theory and technological capability.

International Finance Steven Michael Suranovic 2010 **Poverty, Inequality and Development** Alain de Janvry 2006-06-09 This collection of essays honors a remarkable man and his work. Erik Thorbecke has made significant contributions to the microeconomic and the macroeconomic analysis of poverty, inequality and development, ranging from theory to empirics and policy. The essays in this volume display the same range. As a collection they make the fundamental point that deep understanding of these phenomena requires both the micro and the macro perspectives together, utilizing the strengths of each but also the special insights that come when the two are linked together. After an overview section which contains the introductory chapter and a chapter examining the historical roots of Erik Thorbecke's motivations, the essays in this volume are grouped into four parts, each part identifying a major strand of Erik's work—Measurement of Poverty and Inequality, Micro Behavior and Market Failure, SAMs and CGEs, and Institutions and Development. The range of topics covered in the essays, written by leading authorities in their own areas, highlight the extraordinary depth and breadth of Erik Thorbecke's influence in research and policy on poverty, inequality and development. Acknowledgements These papers were presented at a conference in honor of Erik Thorbecke held at Cornell University on October 10-11, 2003. The conference was supported by the funds of the H. E. Babcock Chair in Food, Nutrition and Public Policy, and the T. H. Lee Chair in World Affairs at Cornell University.

Financial Performance of Microfinance Institutions in Ghana and Uganda Johannes Flosbach 2015 This book examines the determinants of financial performance of microfinance institutions (MFIs) in Ghana and Uganda, against the backdrop of the public and academic debate over the financial and social implications of microfinance. In the absence of a conceptual model, the study chooses an inductive research approach with the objective of defining and developing a conceptual model with the capacity to explain, quantify, and compare the performance of MFIs. The research is particularly relevant in the African context where microloan interest rates regularly exceed 100% per annum and where the microfinance industry is lacking behind its global peers in regard to financial and social performance. Development Economics Debraj Ray 1998-01-12 If you are instructor in a course that uses Development Economics and wish to have access to the end-of-chapter problems in Development Economics, please e-mail the author at debraj.ray@nyu.edu. For more information, please go to <http://www.econ.nyu.edu/user/debraj>. If you are a student in the course, please do not contact the author. Please request your instructor to do so. The study of development in low-income countries is attracting more attention around the world than ever before. Yet until now there has been no comprehensive text that incorporates the huge strides made in the subject over the past decade. Development Economics does precisely that in a clear, rigorous, and elegant fashion. Debraj Ray, one of the most accomplished theorists in development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as theories of economic growth, economic inequality, poverty and undernutrition, population growth, trade policy, and the markets for land, labor, and credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors--among them the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance--consistently favor development. Ray supports his arguments throughout with examples from around the world. The book assumes a knowledge of only introductory economics and explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. Development Economics will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book. And it will be an important resource for policy-makers, who increasingly find themselves dealing with complex issues of growth, inequality, poverty, and social welfare.

Economic Development in Asia John Malcolm Dowling 2004 ECONOMIC DEVELOPMENT IN ASIA explores factors that influence economic growth and development particularly from an Asian development perspective. Grounded firmly on theoretical foundations, it showcases the richness and variety of the Asian development experience through extensive coverage of individual country case studies, institutional developments, and challenges facing policy-makers in the region as well as in-depth discussions of existing empirical evidence. This book is specially tailored to meet the needs of social science students studying economic development in Asia. University students, educators and government policy makers will find the book particularly useful for understanding growth and development trends in the context of a rapidly globalizing world. With the rising tide of interest in Asian economies, the book will prove to be an invaluable for anyone seeking to better understand the process of growth and economic development in the region. **Chinese Economic Development** Chris Bramall 2008-10-08 This book outlines and analyzes the economic development of China between 1949 and 2007. Rather than being narrowly economic, the book addresses many of the broader aspects of development, including literacy, morality, demographics and the environment. The distinctive features of this book are its sweep and that it does not shy away from controversial issues. For example, there is no question that aspects of Maoism were disastrous but Bramall argues that there was another side to the whole programme. More recently, the current system of government has presided over three decades of very rapid economic growth. However, the author shows that this growth has come at a price. Bramall makes it clear that unless radical change takes place, Chinese growth will not be sustainable. This large, comprehensive text is relevant to all those studying the economic history of China as well as its contemporary economy. It is also useful more generally for students and researchers in the fields of international and development economics.

Income Inequality in Rural China Guang Hua Wan 2004

Economic Growth and Development Sibabrata Das 2018-08-16 This text is an introduction to the newer features of growth theory that are particularly useful in examining the issues of economic development. Growth theory provides a rich and versatile analytical framework through which fundamental questions about economic development can be examined. Structural transformation, in which developing countries transition from traditional production in largely rural areas to modern production in largely urban areas, is an important causal force in creating early economic growth, and as such, is made central in this approach. Towards this end, the authors augment the Solow model to include endogenous theories of saving, fertility, human capital, institutional arrangements, and policy formation, creating a single two-sector model of structural transformation. Based on applied research and practical experiences in macroeconomic

development, the model in this book presents a more rigorous, quantifiable, and explicitly dynamic dual economy approach to development. Common microeconomic foundations and notation are used throughout, with each chapter building on the previous material in a continuous flow. Revised and updated to include more exercises for guided self study, as well as a technical appendix covering required mathematical topics beyond calculus, the second edition is appropriate for both upper undergraduate and graduate students studying development economics and macroeconomics.

Economics for a Developing World Michael P. Todaro 1992-01 The book is orientated towards the teaching of economics within the context of the major problems of development and underdevelopment in Third World nations and fills a major void in the teaching materials available for this purpose. Powered by Faith Tapiwa Praise Mapuranga 2018-11-30 This book investigates the impact of Pentecostalism on the participation of women in business in Harare, Zimbabwe. Chapters in this volume trace the history of women's participation in business and highlight how Pentecostalism serves as a major motivating factor. The central argument is that there is a way in which selected women's businesses are "powered by the Spirit." Contributors to the volume utilize case studies of selected Pentecostal churches and ministries to highlight how the religious ideologies of these churches galvanize them to engage in business. They also draw patterns of similarity and difference across the different Pentecostal churches. The volume demonstrates how Pentecostalism both facilitates and militates against women's participation in business concerning a specific setting in Zimbabwe.

Reflections on the Malaysian Economy Post-GE 14 : Issues and Challenges (UUM Press) Irwan Shah Zainal Abidin 2021-10-03 The victory of the Pakatan Harapan (PH), or the Alliance of Hope on May 9, 2018 in the Malaysian 14th General Election (GE14) was not just stunning, but historic. Moreover, the second comeback of Tun Dr. Mahathir Mohamad as the seventh Prime Minister of Malaysia was indeed impressive. The results of the GE14 were clearly against the tide as many political pundits and analysts had predicted a win for the Barisan Nasional (BN) coalition with differences only in matters of margins. Similar to Malaysia's 13th General Election (GE13), which was held on May 5, 2013, the main issue in the GE14 was also about the economy. The rise in cost of living was perhaps the mother of all issues which caused the downfall of the BN government for the first time since independence. Other crucial economic issues centered on alleged corruption practices and manifested through the 1Malaysia Development Berhad (1MDB) saga. As a new federal power for 22 months, the PH government had a daunting task not just to address economic issues mentioned above, but also the other alleged economic problems which they had highlighted in their election manifesto. On top of that, the PH government had the responsibility to maintain, if not to improve further what the BN government had done to the

Malaysian economy in the past, of which World Bank economists described as a success story, "a very strong economy" and "growing towards a high-income." Post-GE14, what is the state of the Malaysian economy and its direction? What are lessons that can be learned from the PH economic management? And with the Perikatan Nasional (PN) government succeeding the federal power in March 2020 in the midst of the Covid-19 pandemic, what are the pressing issues and what needs to be done moving forward especially in the context of the economic challenges arising from the pandemic and post-Covid-19 era? These are some critical questions which this book is trying to address. The book essentially argues for the need to give greater focus to economic issues above anything else by envisioning a new national vision and engineering a new wave of economic structural reforms primarily based on insights from the vast Malaysian economic history lessons

Competition Law in Developing Countries Thomas K. Cheng 2020-05 This book brings together perspectives of development economics and law to tackle the relationship between competition law enforcement and economic development. It addresses the question of whether, and how, competition law enforcement helps to promote economic growth and development. This question is highly pertinent for developing countries largely because many developing countries have only adopted competition law in recent years: about thirty jurisdictions had in place a competition law in the early 1980s, and there are now more than 130 competition law regimes across the world, of which many are developing countries. The book proposes a customized approach to competition law enforcement for developing countries, set against the background of the academic and policy debate concerning convergence of competition law. The implicit premise of convergence is that there may exist one, or a few, correct approaches to competition law enforcement, which in most cases emanate from developed jurisdictions, that are applicable to all. This book rejects this assumption and argues that developing countries ought to tailor competition law enforcement to their own economic and political circumstances. In particular, it suggests how competition law enforcement can better incorporate development concerns without causing undue dilution of its traditional focus on protecting consumer welfare. It proposes ways in which approaches to competition law enforcement need to be adjusted to reflect the special economic characteristics of developing country economies and the more limited enforcement capacity of developing country competition authorities. Finally, it also addresses the long-running debate concerning the desirability and viability of industrial policy for developing countries.
