Design Justice Sasha Costanza-Chock 2020-03-03 An exploration of how design might be led by marginalized communities, dismantle structural inequality, and advance collective liberation and ecological survival. What is the relationship between design, power, and social justice? "Design justice" is an approach to design that is led by marginalized communities and that aims explicitly to challenge, rather than reproduce, structural inequalities. It has emerged from a growing community of designers in various fields who work closely with social movements and community-based organizations around the world. This book explores the theory and practice of design justice, demonstrates how universalist design principles and practices erase certain groups of people—specifically, those who are intersectionally disadvantaged or multiply burdened under the matrix of domination (white supremacist heteropatriarchy, ableism, capitalism, and settler colonialism)—and invites readers to "build a better world, a world where many worlds fit; linked worlds of collective liberation and ecological sustainability." Along the way, the book documents a multitude of real-world community-led design practices, each grounded in a particular social movement. Design Justice goes beyond recent calls for design for good, user-centered design, and employment diversity in the technology and design professions; it connects design to larger struggles for collective liberation and ecological survival.

Dante: The Divine Comedy Robin Kirkpatrick 2004-01-19 A detailed study of the Italian poet explores Dante's renowned narrative poem, discussing the relationship the poet believed to exist between God as creator of the universe and the human being as a creation of God.

Landmarks in Humanities Gloria Fiero 2012-01-11 Landmarks in Humanities is a single-volume survey of global culture designed to help students of humanities, cultural history, and history of the arts to understand and appreciate the relevance of historical works and ideas to their own daily lives. In chronological sequence, Landmarks guides students on a journey of the most notable monuments of the human imagination and the most prominent ideas and issues that have shaped the course and character of the world's cultures from prehistory to the present. The landmarks that mark this journey are the great works of their place and time and, in some cases, of all time. The text reflects the author's extensive background in the study of Humanities, which has enabled her to craft a narrative that is at once brief and comprehensive, giving students a thorough understanding of the interrelatedness of various modes of expression—art and architecture, literature, philosophy, and music—without overwhelming them with detail. Each of the text's fifteen chapters is centered on a key idea related to the period being discussed, and contains a series of valuable pedagogical features including timelines, high-quality maps, and boxed material. Each chapter also takes a unique cultural or historical point of view, often through primary sources, the stylistic relationship between two or more images and ideas or between text and image, and contemporaneous non-Western cultural landmarks and cross-cultural influences. In this edition, each chapter opens with "A First Look" at a landmark work that illustrates the key idea of the chapter and acts as a cultural guidepost to that chapter's overarching theme. This new feature explains the artwork's significance as a landmark in its own time as well as in ours.

Geometric Morphometrics for Biologists Miriam Leah Zelditch 2012-09-24 The first edition of Geometric Morphometrics for Biologists has been the primary resource for teaching modern geometric methods of shape analysis to biologists who have a stronger background in biology than in multivariate statistics and matrix algebra. These geometric methods are appealing to biologists who approach the study of shape from a variety of perspectives, from clinical to evolutionary, because they incorporate the geometry of organisms throughout the data analysis. The second edition of this book retains the emphasis on accessible explanations, and the copious illustrations and examples of the first, updating the treatment of both theory and practice. The second edition represents the current state-of-the-art and adds new examples and summarizes recent literature, as well as provides an overview of new software and step-by-step guidance through details of carrying out the analyses. Contains updated coverage of methods, especially for sampling complex curves and 3D forms and a new chapter on applications of geometric morphometrics to forensics Offers a reorganization of chapters to streamline learning basic concepts Presents detailed instructions for conducting analyses with freely available, easy to use software Provides numerous illustrations, including graphical presentations of important theoretical concepts and demonstrations of alternative approaches to presenting results

Natural Landmarks of Arizona David Yetman 2021-11-02 Natural Landmarks of Arizona celebrates the vast geological past of Arizona's natural monuments through the eyes of a celebrated storyteller who has called Arizona home for most of his life. David Yetman shows us how Arizona's most iconic landmarks were formed millions of years ago and sheds light on the more recent histories of these landmarks as well. These peaks and ranges offer striking intrusions into the Arizona horizon, giving our southwestern state some of the most memorable views, hikes, climbs, and bike rides anywhere in the world. They orient us, they locate us, and they are steadfast through generations. Whether you have climbed these peaks many times, enjoy seeing them from your car window, or simply want to learn more about southwestern geology and history, reading Natural Landmarks of Arizona is a fascinating way to learn about the ancient and recent history of beloved places such as Cathedral Rock, Granite Dells, Kitt Peak, and many others. With Yetman as your guide, you can tuck this book into your glove box and hit the road with profound new knowledge about the towering natural monuments that define our beautiful Arizona landscapes.

Landmarks Robert Macfarlane 2015-03-05 SHORTLISTED FOR THE SAMUEL JOHNSON PRIZE 2015 SHORTLISTED FOR THE WAINWRIGHT PRIZE 2016 Landmarks is Robert Macfarlane's joyous meditation on words, landscape and the relationship between the two. Words are grained into our landscapes, and landscapes are grained into our words. Landmarks is about the power of language to shape our sense of place. It is a field guide to the literature of nature, and a glossary containing thousands of remarkable words used in England, Scotland, Ireland and Wales to describe land, nature and weather. Travelling from Cumbria to the Cairngorms, and exploring the landscapes of Roger Deakin, J. A. Baker, Nan Shepherd and others, Robert Macfarlane shows that language, well used, is a keen way of knowing landscape, and a vital means of coming to love it. Praise for Robert Macfarlane: 'He has a poet's eye and a prose style that will make many a novelist burn with envy' John Banville, Observer "I'll read anything Macfarlane writes" David Mitchell, Independent 'Every movement needs stars. In [Macfarlane] we surely have one, burning brighter with each book.' Telegraph '[Macfarlane] is a godfather of a cultural moment' Sunday Times

Stock Identification Methods Steven X. Cadrin 2013-10-04 Stock Identification Methods, 2e, continues to provide a comprehensive review of the various disciplines used to study the population structure of fishery resources. It represents the worldwide experience and perspectives of experts on each method, assembled through a working group of the International Council for the Exploration of the Sea. The book is organized to foster interdisciplinary analyses and conclusions about stock structure, a crucial topic for fishery science and management. Technological advances have promoted the development of stock identification methods in many directions, resulting in a confusing variety of approaches. Based on central tenets of population biology and management needs, this valuable resource offers a unified framework for understanding stock structure by promoting an understanding of the relative merits and sensitivities of each approach. Describes 18 distinct approaches to stock identification grouped into sections on life history traits, environmental signals, genetic analyses, and applied marks Features experts' reviews of benchmark case studies, general protocols, and the strengths and weaknesses of each identification method Reviews statistical techniques for exploring stock patterns, testing for differences among putative stocks, stock discrimination, and stock composition analysis Focuses on the challenges of interpreting data and managing mixed-stock fisheries

Shifting Landmarks Jeffrey A. Bowman 2018-10-18 In a major contribution to the debate among medievalists about the nature of social and political change in Europe around the turn of the millennium, Jeffrey A. Bowman explores how people contended over property during the tenth and eleventh centuries in the province of Narbonne. He examines the system of courts and judges that weighed property disputes and shows how disputants and judges gradually adapted, modified, and reshaped legal traditions. The region (which comprised Catalonia and parts of Mediterranean France) possessed a distinctive legal culture, characterized by the prominent role of professional judges, a high level of procedural sophistication, and an intense attachment to written law, particularly the Visigothic Code. At the same time, disputants relied on a range of strategies (including custom, curses, and judicial ordeals) to resolve conflicts. Chronic tensions

stemmed from conflicting understandings of property rights rather than from pervasive violence; the changes Bowman tracks are less signs of a world convulsed in struggle than of a world coursing with vitality. In *Shifting Landmarks*, property disputes serve as a bridge between the author's inquiry into learned ideas about justice, land, and the law and his close examination of the rough-and-tumble practice of daily life. Throughout, Bowman finds intimate connections among ink and parchment, sweat and earth.

Landmark Papers in Psychiatry Elizabeth Ryznar 2020-01-23 Advances in the practice of psychiatry have occurred in "fits and starts" over the last several decades. These advances are evident to anyone long affiliated with the field and are best appreciated through direct experience of living through the times. These advances can also be gleaned from historical overviews in textbooks or the recollections of one's teachers and mentors. Returning to the original papers that have ushered in these changes is rarely done for various, mostly practical, reasons. Filtering through thousands of articles in psychiatry may prove daunting, access to the manuscripts may be limited (especially for papers not available electronically), and understanding their impact requires a broader context. Moreover, with so much active research currently occurring in various branches of psychiatry, current practitioners or trainees may find their attention focused on the present, and this is reinforced by electronic search algorithms, which return articles in reverse chronological order. Not surprisingly, citations for articles in virtually all fields decline precipitously for articles over five years old. As scholars and professionals, we are losing touch with our academic heritage. Yet navigating the future of psychiatry requires a firm understanding of its past. This resource serves as a guide for anyone seeking to understand the evolution of psychiatry as a scientific discipline. It does so by summarizing over 100 landmark papers in psychiatry and placing their scientific contributions within a historical context. An introductory section sets the stage for the major theoretical constructs within the field, with chapters devoted to ontology and nosology. Subsequent sections examine major facets of the theory and practice of psychiatry, such as pathogenesis of psychiatric illness, pharmacotherapy, psychotherapy, and somatic treatments. These sections are divided logically into chapters addressing important contributions to the understanding and treatment of specific disorders. A final section explores ethical considerations within each field. This framework echoes the complexity of psychiatry, which cannot be reduced to a single set of diagnoses or subspecialty categories. Highlighting the research trajectory of psychiatry, this resource will appeal to academics, trainees, and practitioners who desire a comprehensive, easy-to-read, up-to-date collection of psychiatry's pivotal moments. By understanding the challenges, inspirations, and insights from the past, readers will be better poised to address new and ongoing challenges within the field.

Found Objects in Art Therapy Daniel Wong 2021-02-18 This book shows how art therapists can use found objects in their work with clients. Found objects can be a highly affordable, imaginative and creative way of working, and are particularly effective when working with marginalised populations and clients who have experienced trauma. This edited collection contains chapters from a wide variety of contributors from around the world and covers a vast array of topics, including the use of found objects in clinical settings, community and art practice, pedagogy and self-care. This is the ideal resource for any art therapist wishing to explore the use of this non-traditional medium to enrich their practice.

The Humanities Henry M. Sayre 2011-07-15 This 12 month access code care gives you access to all of MyArtsLab's tools and resources, including a complete eText of your book. You can also buy immediate access to MyArtsLab with Pearson eText online with a credit card at www.myartslab.com For an undergraduate introductory level course in the humanities. SEE CONTEXT AND MAKE CONNECTIONS... ACROSS THE HUMANITIES The Humanities: Culture, Continuity & Change , 2e helps students see context and make connections across the humanities by tying together the entire cultural experience through a narrative storytelling approach. Written around Henry Sayre's belief that students learn best by remembering stories rather than memorizing facts, it captures the voices that have shaped and influenced human thinking and creativity throughout our history. With a stronger focus on engaging students in the critical thinking process, this new edition encourages students to deepen their understanding of how cultures influence one another, how ideas are exchanged and evolve over time, and how this collective process has led us to where we stand today. With several new features, this second edition helps students to understand context and make connections across time, place, and culture.

Human Remains: Another Dimension Tim Thompson 2017-02-16 Human Remains - Another Dimension: The Application of 3D Imaging in the Funerary Context brings together scattered literature on the topic, assimilating disparate pieces that relate to the novel use of non-invasive three-dimensional imaging techniques in the forensic context. All chapters are written by specialists in the field who use these types of imaging techniques within their research, bringing an engaging and comprehensive view that demonstrates the current use of 3D non-invasive imaging techniques using case studies. In addition, the advantages for using such methods, their current limitations, and possible solutions are also reviewed. Includes three dimensional imaging techniques presented from a forensics point-of-view Written by well-renowned specialists in the field Assimilates disparate pieces that relate to the novel use of non-invasive three-dimensional imaging techniques

Humanities for the Environment Joni Adamson 2016-11-10 Humanities for the Environment, or HfE, is an ambitious project that from 2013-2015 was funded by a generous grant from the Andrew W. Mellon Foundation. The project networked universities and researchers internationally through a system of 'observatories'. This book collects the work of contributors networked through the North American, Asia-Pacific, and Australia-Pacific observatories. Humanities for the Environment showcases how humanists are working to 'integrate knowledges' from diverse cultures and ontologies and pilot new 'constellations of practice' that are moving beyond traditional contemplative or reflective outcomes (the book, the essay) towards solutions to the greatest social and environmental challenges of our time. With the still controversial concept of the 'Anthropocene' as a starting point for a widening conversation, contributors range across geographies, ecosystems, climates and weather regimes; moving from icy, melting Arctic landscapes to the bleaching Australian Great Barrier Reef, and from an urban pedagogical 'laboratory' in Phoenix, Arizona to Vatican City in Rome. Chapters explore the ways in which humanists, in collaboration with communities and disciplines across academia, are responding to warming oceans, disappearing islands, collapsing fisheries, evaporating reservoirs of water, exploding bushfires, and spreading radioactive contamination. This interdisciplinary work will be of great interest to scholars in the humanities, social sciences, and sciences interested in interdisciplinary questions of environment and culture.

ONEEVERYONE Ann Hamilton 2020-03-21 Ohio State students, faculty and staff were photographed by artist and professor Ann Hamilton through a semi-transparent membrane that registers in focus only what immediately touches its surface while rendering more softly the gesture or outline of the body. In these images, touch-something we feel more than we see-is visible. In them, we feel the glance of cloth's fall, the weight of a hand, the press of a cheek, the possibility of recognition in portraits haunted by contact. Standing behind the semi-opaque film, one can hear but can not see, hidden until stepping toward the surface, guided by my voice. Each press of the object, the face, a hand, or cloth touching the membrane is revealed in focus, the shallow depth of field a consequence of the membrane's optical qualities. The images made in this exchange-between a subject that offers self or object and a voice that stands in for the visually absent camera-record an interiority that is perhaps more private, more vulnerable than the self we offer up in the world of a constantly present camera. Following and trusting the voice while having a sense of being hidden makes a space for this vulnerability. Each image is a tactile register of an exchange.

Reconstructing Historic Landmarks Wayde Brown 2018-08-24 Historic reconstructions have been a consistent part of the historic preservation and heritage conservation movements in the United States and Canada. Indeed, reconstruction has been the primary tool at the most influential historic sites for example: the Governor's Palace and the Capitol at Colonial Williamsburg, and in Canada, the Fortress of Louisbourg.

Dozens of other reconstructions have appeared during the past century in North America, undertaken by individuals, communities, states and provinces, and by national agencies responsible for cultural heritage. Despite this prevalence, historic reconstructions have received little scholarly attention and the question of what motivated the proponents of these projects remains largely unexamined. This book explores that question through detailed studies of ten historic reconstructions located throughout Canada and the United States, ranging from 1908 to 2011. Drawing upon diverse archival sources and site investigations, the proponents of each site are given voice to address their need to remake these landmarks, be it to sustain, to challenge or even subvert a historical narrative or – with reference to contemporary heritage studies – to reclaim these spaces. Historic Reconstructions provides a fascinating insight into these shifting concepts of history in North America and will be of considerable interest both to students and scholars of historic preservation and indeed to heritage professionals involved in reconstructions themselves.

Landmark Papers in Clinical Chemistry Richard M. Rocco 2005-11-15 This is the first major review of the developments in clinical laboratory science in the 20th century presented in the words of the original inventors and discoverers. Introductory comments by the editor help place the works within the historical context. Landmark Papers addresses: *The origin of the home pregnancy test available today in every drugstore *The woman who invented a billion dollar technology, refused to patent it and went on to win a Nobel Prize *The scientists who worked on the US Government's crash program at the start of WWII to find a substitute for the malaria drug quinine *The blood test used to monitor the effectiveness of cholesterol lowering drugs that today are taken by over 20 million patients *The graduate student who invented a technology for testing for infectious diseases, took it to Africa to screen people for malaria for the first time and which is now used to test for HIV infection world-wide *The invention of molecular diagnostics by Linus Pauling and the road to individualized medicine *The development of the glucose meter used by diabetics up to six times a day to monitor their metabolic control *First book of this kind dedicated to clinical chemistry *Thirty-nine articles that have shaped the field today *A survey of the major developments in the field clinical chemistry in the 20th century

Law, Rights and Ideology in Russia Bill Bowring 2013-04-17 Law, Rights and Ideology in Russia: Landmarks in the destiny of a great power brings into sharp focus several key episodes in Russia's vividly ideological engagement with law and rights. Drawing on 30 years of experience of consultancy and teaching in many regions of Russia and on library research in Russian-language texts, Bill Bowring provides unique insights into people, events and ideas. The book starts with the surprising role of the Scottish Enlightenment in the origins of law as an academic discipline in Russia in the eighteenth century. The Great Reforms of Tsar Aleksandr II, abolishing serfdom in 1861 and introducing jury trial in 1864, are then examined and debated as genuine reforms or the response to a revolutionary situation. A new interpretation of the life and work of the Soviet legal theorist Yevgeniy Pashukanis leads to an analysis of the conflicted attitude of the USSR to international law and human rights, especially the right of peoples to self-determination. The complex history of autonomy in Tsarist and Soviet Russia is considered, alongside the collapse of the USSR in 1991. An examination of Russia's plunge into the European human rights system under Yeltsin is followed by the history of the death penalty in Russia. Finally, the secrets of the ideology of 'sovereignty' in the Putin era and their impact on law and rights are revealed. Throughout, the constant theme is the centuries long hegemonic struggle between Westernisers and Slavophiles, against the backdrop of the Messianism that proclaimed Russia to be the Third Rome, was revived in the mission of Soviet Russia to change the world and which has echoes in contemporary Eurasianism and the ideology of sovereignty.

Landmarks in Humanities with Core Concepts Gloria K. Fiero 2005-02-01 LANDMARKS in Humanities is a single-volume survey of global culture designed for students of humanities, cultural history, and history of the arts. In chronological sequence, LANDMARKS highlights the most notable monuments of the human imagination--those works of art and architecture, literature, philosophy, and music that have been foremost in shaping the world's cultures. The text's fifteen chapters are unified by core concepts related to each period, such as Classicism, Christendom, or Modernism. Chapter features include "Ideas and Issues" boxes containing primary-source excerpts; "Parallels" sidebars relating images and ideas; "Beyond the West" sections highlighting influential landmarks of Asian, African, and Oceanic cultures; and chapter-ending timelines keying landmarks in humanities to major historical events. Throughout the text, high quality maps place key events and works in a clear geographical context. In addition, an outstanding supplements package accompanies the text, featuring resources for both students and instructors. Each copy of LANDMARKS will include a free student DVD-ROM, Core Concepts in Humanities, which contains interactive activities for each chapter in the text plus numerous other study resources for all humanities disciplines.

The Landmark Thucydides Thucydides 2008-04 Chronicles two decades of war between Athens and Sparta. *Preserving New York* Anthony Wood 2013-10-28 Preserving New York is the largely unknown inspiring story of the origins of New York City's nationally acclaimed landmarks law. The decades of struggle behind the law, its intellectual origins, the men and women who fought for it, the forces that shaped it, and the buildings lost and saved on the way to its ultimate passage, span from 1913 to 1965. Intended for the interested public as well as students of New York City history, architecture, and preservation itself, over 100 illustrations help reveal a history richer and more complex than the accepted myth that the landmarks law sprang from the wreckage of the great Pennsylvania Station. Images include those by noted historic photographers as well as those from newspaper accounts of the time. Forgotten civic leaders such as Albert S. Bard and lost buildings including the Brokaw Mansions, are unveiled in an extensively researched narrative bringing this essential episode in New York's history to future generations tasked with protecting the city's landmarks. For the first time, the story of how New York won the right to protect its treasured buildings, neighborhoods and special places is brought together to enjoy, inform, and inspire all who love New York.

Landmarks in Continental European Literature Philip Gaskell 1999 Putting each work in its literary and historical context, Landmarks in Continental European Literature discusses thirty-two key works of European literature, from Dante to Brecht. Part of the three-book series, Landmarks in European Literature, which presents the major authors of European literature and their works, from ancient times until the 20th century, this volume is designed for general readers and students, looking for additional guidance in their reading or wishing to understand the context in which these fascinating works were written. Helping and encouraging readers to explore and enjoy the European literary heritage, the Landmarks in European Literature series includes Landmarks in Continental European Literature, Landmarks in Classical Literature, and Landmarks in English Literature, all of which will prove valuable at any library supporting literary studies.

to the needs of each institution, instructor, and student. With the ability to incorporate new extended readings, streaming music, and artwork, LANDMARKS renews the understanding of the relationship between world cultures and humankind's creative legacy. LANDMARKS is unique in several ways: -It is interdisciplinary: it explores the interrelationship of various modes of expression - art, music, literature - as they work to create, define, and reflect the unique culture of a given time and place. -It is thematic: each chapter advances a key idea, presented in the chapter title and explained in the introductory paragraph. The key idea offers a context for individual landmarks as they unfold chronologically. For instance, Chapter 1 ("Origins: The First Civilizations") surveys our earliest cultures, emphasizing human strategies for survival and communal life; Chapter 14 ("Modernism: The Assault on Tradition") considers the radical rejection of conventional values and styles that revolutionized early twentieth-century culture. -It is selective: some landmarks have been chosen for their universality, some for their singular beauty, and some for their iconic or symbolic value. Certain landmarks - the Statue of Liberty, the Mona Lisa, the sonnets of Shakespeare - meet more than one of these criteria. The author's choice of landmarks may differ from those of other individuals, and readers may wish to add landmarks of their own. **Available exclusively on McGraw-Hill Create®, the Traditions Collection contains western and non-western readings as well as ancient and contemporary offerings, hand selected from a number of different disciplines, such as literature, philosophy, and science. Writing America Shelley Fisher Fishkin 2015-11-11 Winner of the John S. Tuckey 2017 Lifetime Achievement Award for Mark Twain Scholarship from The Center for Mark Twain Studies American novelist E.L. Doctorow once observed that literature "endows places with meaning." Yet, as this wide-ranging new book vividly illustrates, understanding the places that shaped American writers' lives and their art can provide deep insight into what makes their literature truly meaningful. Published on the eve of the 50th anniversary of the Historic Preservation Act, Writing America is a unique, passionate, and eclectic series of meditations on literature and history, covering over 150 important National Register historic sites, all pivotal to the stories that make up America, from chapels to battlefields; from plantations to immigration stations; and from theaters to internment camps. The book considers not only the traditional sites for literary tourism, such as Mark Twain's sumptuous Connecticut home and the peaceful woods surrounding Walden Pond, but also locations that highlight the diversity of American literature, from the New York tenements that spawned Abraham Cahan's fiction to the Texas pump house that irrigated the fields in which the farm workers central to Gloria Anzaldúa's poetry picked produce. Rather than just providing a cursory overview of these authors' achievements, acclaimed literary scholar and cultural historian Shelley Fisher Fishkin offers a deep and personal reflection on how key sites bore witness to the struggles of American writers and inspired their dreams. She probes the global impact of American writers' innovative art and also examines the distinctive contributions to American culture by American writers who wrote in languages other than English, including Yiddish, Chinese, and Spanish. Only a scholar with as wide-ranging interests as Shelley Fisher Fishkin would dare to bring together in one book writers as diverse as Gloria Anzaldúa, Nicholas Black Elk, David Bradley, Abraham Cahan, S. Alice Callahan, Raymond Chandler, Frank Chin, Elizabeth Cook-Lynn, Countee Cullen, Frederick Douglass, Paul Laurence Dunbar, Jessie Fauset, William Faulkner, F. Scott Fitzgerald, Allen Ginsberg, Jovita González, Rolando Hinojosa, Langston Hughes, Zora Neale Hurston, Lawson Fusao Inada, James Weldon Johnson, Erica Jong, Maxine Hong Kingston, Irena Klepfisz, Nella Larsen, Emma Lazarus, Sinclair Lewis, Genny Lim, Claude McKay, Herman Melville, N. Scott Momaday, William Northup, John Okada, Miné Okubo, Simon Ortiz, Américo Paredes, John P. Parker, Ann Petry, Tomás Rivera, Wendy Rose, Morris Rosenfeld, John Steinbeck, Harriet Beecher Stowe, Henry David Thoreau, Mark Twain, Yoshiko Uchida, Tino Villanueva, Nathanael West, Walt Whitman, Richard Wright, Hisaye Yamamoto, Anzia Yezierska, and Zitkala-Sa. Leading readers on an enticing journey across the borders of physical places and imaginative terrains, the book includes over 60 images, and extended excerpts from a variety of literary works. Each chapter ends with resources for further exploration. Writing America reveals the alchemy though which American writers have transformed the world around them into art, changing their world and ours in the process.

Oxidative Stress Helmut Sies 2013-10-22 Oxidative Stress is intended as an in-depth account of knowledge and problems in the field of oxygen-related damage in biological systems. The topics range from an assessment of molecular events in in vitro model systems to complex problems in clinical medicine. Organized into two parts with a total of 18 chapters, this book begins with an introduction to oxidative stress, elucidating specific topics on reactive oxygen species, detoxification system, and nature of oxidative damage. The first part focuses on models used with cells and tissues in the study of oxidative stress, whereas the second part describes the processes elicited by oxidative stress.
