factor of eight or 87.5 percent. Due to filter dynamics, the cube law does not apply exactly

and, typically, the reduction is between a cube and a square relationship. Even relatively modest reductions of 10 percent to 20 percent in ACR provide significant benefits. A 20 percent

decrease in ACR will enable close to a 50 percent reduction in fan ...

Infiltration Modeling Guidelines for Commercial Building Energy ...

fluid dynamics (CFD), typically building energy simulation tools use a simplified approach to estimate air change rate based on building air tightness measured by pressurization tests [2]. Several field surveys and test methods have been developed to specify building level air infiltration rates for a known standard pressure difference across the envelope [3]. In an effort ...
