Guarding the Single Mother Leslie North Retired Navy SEAL, Clint Backwater, enjoys his solitary life as owner of the Ask Questions Later gun range. It’s the kind of place you find because you know a guy. So when Leila Ortiz, a petite woman with a “baby on board” sticker on the back of her car—and an 18-month-old boy in her arms—shows up at the range, panicked and desperate for a gun, he knows something is wrong. Having grown up in the foster system, Clint has seen what happens when you let yourself get too invested—things get messy, people leave. He made himself a promise to never get emotionally involved again, but the former SEAL in him feels the tug to help this woman and her child. Leila’s ex-husband is being released from prison early on good behavior and she found out too late. He was supposed to serve five years, not two, and Leila is unprepared to protect herself and her son. She promised him they’d never run again—they’ve made a nice life for themselves and the last thing she wants to do is leave it all behind. When Clint refuses to give Leila a gun without lessons, she agrees to return to the range to learn. At first, Leila won’t say why she’s so desperate for protection, but when the threats from her ex escalate, it becomes clear what she’s afraid of. Clint is a loner. Always has been, always will be. So when Leila and her little son enter his life, it hits him—hard— maybe being alone isn’t what he needs. Still, having his solitary life disrupted when he invites the little family into his home is a bit tougher to take than he thought. With Leila and her son in danger, though, he’ll do whatever it takes to keep them safe—even putting up with stray toys and changing a nappy or two. But the biggest danger might be to his heart, when it starts to look like the safest thing for Leila and her baby might be to leave her problems—and her budding relationship with Clint—behind.

Constitutional Mythologies Alain Marciano 2011-08-02 Our societies obviously rest on common beliefs. These “myths” are tools that help us to develop and build common identities; they form the structure around which societies function. This does not imply that these beliefs are “true,” in the sense that they would be supported by empirical facts. In social matters, myths have undoubtedly important functions to play even if no empirical facts support them. On the other hand, and precisely because they are not discussed, myths may be problematic: they may create illusions, conserve structures that are inefficient and unable to improve the situation of citizens. This is particularly true with constitutions. Constitutions are very important for societies: a constitution is a document – even in societies based on “unwritten” constitutions – which binds citizens together, creating unity among them, and which forms the framework within which our activities take place. As Nobel Prize laureate James Buchanan used to say: constitutions contain the rules of the social game we play in our everyday life. However, constitutions are not frequently debated by citizens. This is why we end up with common beliefs about these constitutions: they are above our heads, around us. We take them, their role, function, and nature as given. The purpose of this volume to investigate and challenge common constitutional myths. Featuring contributions from prominent economists, political scientists, and legal scholars, the chapters in this volume address such myths as “constitutions are binding social contracts,” “constitutions are economic documents” and “constitutions are legal documents.” Illustrating their analyses with historical and contemporary examples from the United States, Canada, and Europe, the authors build a multi-layered approach to understanding constitutions and their implications for social and political influence.

Concepts from Tensor Analysis and Differential Geometry Tracy Y. Thomas 2016-06-03 Concepts from Tensor Analysis and Differential Geometry discusses coordinate manifolds, scalars, vectors, and tensors. The book explains some interesting formal properties of a skew-symmetric tensor and the curl of a vector in a coordinate manifold of three dimensions. It also explains Riemann spaces, affinely connected spaces, normal coordinates, and the general theory of extension. The book explores differential invariants, transformation groups, Euclidean metric space, and the Frenet formulae. The text describes curves in space, surfaces in space, mixed surfaces, space tensors, including the formulae of Gaus and Weingarten. It presents the equations of two scalars K and Q which can be defined over a regular surface S in a three dimensional Riemannian space R. In the equation, the scalar K, which is an intrinsic differential invariant of the surface S, is known as the total or Gaussian curvature and the scalar U is the mean curvature of the surface. The book also tackles families of parallel surfaces, developable surfaces, asymptotic lines, and orthogonal ennuples. The text is intended for a one-semester course for graduate students of pure mathematics, of applied mathematics covering subjects such as the theory of relativity, fluid mechanics, elasticity, and plasticity theory.
